The method can be used to treat oxidative damage to skin, by decreasing or preventing an increase in the level of damage to a biomolecule of the patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modulating oxidative stress level in a cell, involves contacting the cell with an oxidative stress regulator selected from colostrinin, its constituent peptide, analog or their combinations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Sequences AAB72246 - AAB72255 represent peptides derived from clostrinin, a proline rich polypeptide aggregate contained in colostrum. The peptides have immune response modulatory activity, and are capable of inducing cytokines. Colostrinin and its derived peptides are useful for inducing cytokines production, for modulating an immunological response and for inducing blood cell proliferation. The peptides are useful in the treatment of disorders of the central nervous system, neurological disorders, dementia, neurodegenerative diseases, Alzheimer's disease, motor neurone disease, psychosis, neurosis, chronic disorders of the immune system, bacterial and viral infections and
neurodegenerative disease; Alzheimer's disease; psychosis;
infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Neuroprotective; neural cell differentiation regulator; colostrinin;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                      Sheep; colostrinin; proline rich polypeptide; colostrum; immune disorder; central nervous system disorder; dietary supplement; beta-amyloid plaque.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptides having an N-terminal amino acid sequence isolated from colostrinin for treating e.g. disorders of the central nervous system and immune system, viral and bacterial infections, and diseases characterized by amyloid plaques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the sequences of a number of peptides found in ewe's colostrinin. Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system disorders such as bacterial and viral infections, to improve the development of a child's immune system, as a dietary supplement, and to promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Colostrinin; immune response; cytokine; blood cell proliferation; central nervous system disorder; neurological diosrder; mental disorder;

The present sequence is that of a colostrinin constituent peptide that is preferred for use as an immunological regulator and as a blood cell consisted methods of the invention. It is classified as having a beta-casein homologue precursor. Methods are claimed for: inducing a cabitation or an organism, and cell is present in a cell culture, a tissue, an organ or an organism, and the cell is mammalian, including human; modulating an immune response in a cell by contact with the immunological regulator under conditions a cell by contact with the immunological regulator under conditions a cell by contact with the immunological regulator under conditions a deflective to induce a cytokine, where the immunological regulator are sponse in a caministered topically or as part of a dietary supplement, and where the immune response is specific or non specific, an interferon response or an antibody response; modulating blood cell proliferation by contacting antibody response; modulating blood cell proliferation by contacting antibody response; modulating blood cell regulator, where the blood cells are considered and are mammalian or human, and where the blood cells are increased in number or differentiated; and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modulation of blood cell proliferation in a patient involves use of blood cell regulator selected from colostrinin, its constituent peptide and/or
invention is useful for promoting the differentiation of cells and for treating damaged neural cells in a patient. The present amino acid sequence represents a specifically claimed colostrinin peptide used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Colostrinin, colostrum, immunomodulator, cardiovascular,
blood cell regulator, cytokine inducer, beta-casein, human.
                                                                                                                                                         Length 12;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises a method for promoting cell differentiation (e.g. neural cell differentiation). The method involves contacting cells with a neural cell regulator (i.e. a colostrinin peptide) in order to change the cells in morphology to form neural cells. Colostrinin is a proline-rich polypeptide aggregate that is present in colostrum. The method of the
                                                                                                            use ot colostrinin, its constituent peptide or analog as a neural cell regulator, for promoting neural cell differentiation and treating damaged neural cells in a patient.
                                                                                                                                                                                                                                                                       The present invention relates to a method for promoting neural cell differentiation and treating damaged neural cells, using colostrinin and colostrinin end peptides (e.g. the present peptide) as a neural cell regulator. Colostrinin is a polypeptide complex found in colostrum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cell differentiation; neural cell regulator; colostrinin peptide; cell formation; proline-rich polypeptide aggregate; colostrum; cell treatment.

The invention relates to a composition which comprises a blood cell regulator selected from colostrinin, its constituent peptide and/or analogue. The invention is used for modulating the oxidative stress level in a cell e.g. mammalian or human cell present in a cell culture, tissue, corgan, or organism; or for treating oxidative stress during/ after a premature birth or normal birth, preventing/delaying aging in a premature birth or normal birth, preventing/delaying aging in a patient, enhancing wound healing, and the reduction of side effects of cosmetic procedures. The method changes the level of an oxidising species in the cell, such as decreases or prevents increase in the level of damage to a biomolecule of the patient selected from DNA, protein and/or in the cell, such he same conditions when the oxidative stress results in regulator is not present. The modulation of oxidative stress results in chanced repair, regeneration, and replacement of cells, tissues and organs (e.g. kidney, liver, pancreas, skin, and the other internal and
                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Blood cell regulator; colostrinin; constituent peptide; oxidative stress; therapy; oxidative damage; skin; aging; wound healing; cell replacement; tissue; oxigan; cosmetic procedure; repair; regeneration; preservation; transplantation; implantation; dermatological; vulnerary.
               cytokine-inducing composition comprises a pharmaceutical carrier and an active agent such as the present peptide. Cytokines induced by this peptide in human leucocyte cultures include interferon-gamma, tumour necrosis factor-alpha, interleukin-6 and interleukin-10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Composition useful for the modulation of blood cell proliferation in a patient comprises a blood cell regulator selected from colostrinin, its constituent peptide and/or analog.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes the use of a modulator selected from colostrinin, its constituent peptide, its active analogue, and a combination of these, for modulating an intracellular sipaling molecule in a cell, down regulating 4HRE-mediated lipid peroxidation in a cell, inhibiting apoptosis in a cell, protecting against DNA damage in a cell, inhibiting apoptosis in a cell, protecting against DNA damage in a cell, and reducing the toxic effect of beta-amyloid or retinoic acid on a cell. The modulator has cytostatic activity, and can be used as a 4HNE inhibitor. The modulator is useful in the manufacture of a medicament for reducing 4HNE-protein adduct formation, inhibiting 4HNE-mediated all adduct formation, inhibiting 4HNE-mediated activation of c-Jun MHZ-terminal kinases colostrinin, or its constituent peptide or active analogue is useful for inhibiting apoptosis in a cell, protecting against DNA damage in a cell,
                                                                                                                                                                                                                                                                                                                                                                                                                   modulator; colostrinin; intracellular signaling molecule modulator; 4HNB-mediated lipid peroxidation down regulation; apoptosis inhibition; DNA damage; beta-amyloid; retinoic acid; cytostatic; 4HNB inhibitor; 4HNB-protein adduct formation reduction; 4HNB-mediated glucathione depletion inhibition; p53 inhibition; c-Jun NH2-terminal kinase inhibition.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of a peptide that can be recovered from covine colostrinin using the method of the invention. The invention covine colostrinin using the method of the invention. The invention corporates a method for the recovery of peptides (especially colostrinin) corporates a method involves mixing the colostrum with an alcohol to high yield. The method involves mixing the colostrum with an alcohol to containing higher molecular weight caseins and other proteins. Best containing higher molecular weight caseins and other proteins. Best creatists are obtained using methanol or channol of at least 80%, and preferably up to 100%, purity. The alcohol phase is then separated from the precipitate, and the colostrinin is separated from the alcohol, preferably by evaporation, to form a colostrinin-rich phase, which is recovered. A precipitation agent, such as ammonium sulfate, may be added either to the alcohol phase or, preferably, to the colostrinin-rich phase corporation of the colostrinin peptides. The method is containing induce precipitation of the colostrinin peptides. The method is containing to precipitation of the colostrinin peptides from fluids containing containing induce precipitation of the colostrinin peptides from fluids containing containing induce precipitation of the colostrinin peptides from fluids containing containing acide. In an example from the invention, the antigenic profile of acide. In an example from the invention, the antigenic profile of soft peptides was determined by ELISA using antibodies prepared against 9 synthetic peptides, including a peptide having the present sequence contains and periods antigen class B-9).
                                                                                                                                                                             ö
or reducing the toxic effect of beta-amyloid or retinoic acid on a cell. The present sequence represents a synthetic constituent peptide of colostrinin, which can be used as a modulator in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Recovering peptides such as colostrinin from mammalian colostrum, by mixing colostrum with alcohol to form alcohol phase containing peptides and precipitate, separating alcohol phase from precipitate, and recovering alcohol phase.
                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptides having an N-terminal amino acid sequence isolated from colostrinin for treating e.g. disorders of the central nervous system and immune system, viral and bacterial infections, and diseases characterized by amyloid plaques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sheep; colostrinin; proline rich polypeptide; colostrum; immune disorder; central nervous system disorder; dietary supplement; beta-amyloid plaque.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides the sequences of a number of peptides found in ewe's colostrinin. Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system disorders such as bacterial and viral infections, to improve the development of a child's immune system, as a dietary supplement, and to promote the dissolution of beca-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

```
Enterococcus facetium encoding an Enterococcus facetium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 come of 10 fully defined sequences given in the (or comprising 40 composition in the comprising 40 complement or sequences hybridising to it). Also included are a crecombinant vector comprising the nucleic acid operably linked to creombinant vector comprising the nucleic acid operably linked to single-stranded probe comprising the nucleic acid operably linked to consortiption regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids are chosen from 3654 disclosed sequences encoding 3654 disclosed proteins.

The nucleic acids is useful for disgnosing pathological conditions infection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococus faccines in the present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Otsuki T, Wakamatsu A, Sato H, Ishii S;

New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases in which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                            The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54011). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                     Claim 14; SEQ ID NO 1945; 205pp; English.

US-09-270-767-35554
Sequence 35554, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Waleic acids and proteins of Drosophila melanogaster
FILE REFRENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 35554
LENGTH: 235
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 260138, Application US/10424599
Publication No. US20040031072A1
GENERAL INCOMMATION:
BAPLICANT: La Rosa Thomas J
APPLICANT: Zhou Yihua
APPLICANT: Zhou Yihua
APPLICANT: Cao Yongwei
TITLE OF INVENTION: Soy Nucleic Acid Molecules and Other Molecules Associated With
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
FILE REFERENCE: 38-21(53223)B
FURRENT APPLICATION NUMBER: US/10/424,599
CURRENT FILING DATE: 2003-04-28
NUMBER: OF SEQ ID NOS: 285684
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

1: pir1:* 2: pir2:* 3: pir3:* 4: pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Proc. Natl. Acad. Sci. U.S.A. 99:13148-13153 (2002).

-!- FUNCION: Part of a binding-protein-dependent transport system.

Probably responsible for the translocation of the substrate across the membrane (By similarity).

-!- SUBCELLUIAR LOCATION: Integral membrane protein (By similarity).

-!- SIMILARITY: Belongs to the binding-protein-dependent transport EMBL; AE014602; AAN34268.1; -.
                                                                                                                                                                                                                                           Gamas P., de Carvalho Niebel F., Lescure N., Cullimore J.;

## ALIGNMENTS

Modulating oxidative stress level in a cell, involves contacting the cell with an oxidative stress regulator selected from colostrinin, its constituent peptide, analog or their combinations. The present invention relates to a method for modulating the oxidative stress level in a cell or a patient, comprising contacting the cell with, or administering to the patient, an oxidative stress regulator selected from colostrinin, or its constituent peptide (e.g. the present peptide), to change the level of an oxidising species in the cell. The method can be used to treat oxidative damage to skin, by decreasing or preventing an increase in the level of damage to a biomolecule of the patient Dermatological; oxidative stress regulator; colostrinin. a proline rich polypeptide aggregate confained in colostrum. The peptides have immune response modulatory activity, and are capable of inducing cytokines. Colostrinin and its derived peptides are useful for inducing inducing blood cell proliferation. The peptides are useful for inducing thouse and for interaction. The peptides are useful in the treatment of disorders of the central nervous system, neurological disorders, mental disorders, dementia, neurodegenerative diseases, ablabiance's diseases, motor neurone disease, psychosis, neurosis, disorders of the immune system, bacterial and viral infections and acquired immunological deficiencies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequences AAB72246 - AAB72275 represent peptides derived from clostrinin,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptides having an N-terminal amino acid sequence isolated from colostrinin for treating e.g. disorders of the central nervous system and immune system, viral and bacterial infections, and diseases characterized by amyloid plaques.
                                                                                                                                                                                                                                                                    Sheep; colostrinin; proline rich polypeptide; colostrum; immune disorder; central nervous system disorder; dietary supplement; beta-amyloid plaque.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Colostrinin; immune response; cytokine; blood cell proliferation; central nervous system disorder; neurological diosrder; mental disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides the sequences of a number of peptides found in ewe's colostrinin. Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system disorders such as bacterial and viral infections, to improve the development of a child's immune system, as a dietary supplement, and to promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 15;

The present sequence is that of a colostrinin constituent peptide that is preferred for use as an immunological regulator and as a blood cell regulator in claimed methods of the invention. It is classified as having a cytokine in a cell by contact with an immunological regulator, where the cytokine in a cell by contact with an immunological regulator, where the coll is mammalian, including human; modulating an immune response in a cell by contact with the immunological regulator under conditions of fective to induce a cytokine; modulating an immune response in a patient by administering an immunological regulator under conditions ceffective to induce a cytokine; where the immunological regulator is administered topically or as part of a distary supplement, and where the immune response is specific or non specific, an interferon response or an antibody response; modulating blood cell proliferation by contacting blood cells with a blood cell regulator, where the blood cells are present in a cell culture or an organism, are mammalian or human, and where the blood cells are increased in number or differentiated; and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modulation of blood cell proliferation in a patient involves use of blood cell regulator selected from colostrinin, its constituent peptide and/or
invention is useful for promoting the differentiation of cells and for treating damaged neural cells in a patient. The present amino acid sequence represents a specifically claimed colostrinin peptide used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Colostrinin; colostrum; immunomodulator; cardiovascular;
blood cell regulator; cytokine inducer; beta-casein; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises a method for promoting cell differentiation (e.g. neural cell differentiation). The method involves contacting cells with a neural cell regulator (i.e. a colostrinin peptide) in order to change the cells in morphology to form neural cells. Colostrinin is a proline-rich polypeptide aggregate that is present in colostrum. The method of the
                                                                                                                  use ot colostrinin, its constituent peptide or analog as a neural cell regulator, for promoting neural cell differentiation and treating damaged neural cells in a patient.
                                                                                                                                                                                                                                                                        The present invention relates to a method for promoting neural cell differentiation and treating damaged neural cells, using colostrinin and colostrinin peptides (e.g. the present peptide) as a neural cell regulator. Colostrinin is a polypeptide complex found in colostrum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Neural cell differentiation; neural cell regulator; colostrinin peptide; neural cell formation; proline-rich polypeptide aggregate; colostrum; neural cell treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Promoting cell differentiation in a patient involves use of blood cell regulator selected from colostrinin, its constituent peptide and/or

The invention relates to a composition which comprises a blood cell regulator selected from colostrinin, its constituent peptide and/or analogue. The invention is used for modulating the oxidative stress level in a cell e.g. mammalian or human cell present in a cell culture, tissue, corgan, or organism; or for treating oxidative damage to the skin of a patient e.g. animal or human; to modulate oxidative stress during/ after a premature birth or normal birth, preventing/delaying aging in a premature birth or normal birth, preventing/delaying aging in a premature birth or normal birth, preventing/delaying aging species in the cell, such as decreases or prevents increase in the level of damage to a biomolecule of the patient selected from DNA, protein and/or lipid, compared to the same conditions when the oxidative stress regulator is not present. The modulation of oxidative stress results in chanced repair, regeneration, and replacement of cells, tissues and organs (e.g. kidney, liver, pancreas, skin, and the other internal and
                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Blood cell regulator; colostrinin; constituent peptide; oxidative stress; therapy; oxidative damage; skin; aging; wound healing; cell replacement; tissue; organ; cosmetic procedure; repair; regeneration; preservation; transplantation; implantation; dermatological; vulnerary.

The modulator has cytostatic activity, and can be used as a 4HNE inhibitor. The modulator is useful in the manufacture of a medicament for reducing 4HNE-protein adduct formation, inhibiting 4HNE-mediated glutathione depletion, inhibiting 4HNE-induced activation of ps] protein, and/or inhibiting 4HNE-induced activation of c-Jun NH2-rerminal kinases colostrinin, or its constituent peptide or active analogue is useful for inhibiting apoptosis in a cell, protecting against DNA damage in a cell,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Use of colostrinin for e.g. modulating an intracellular signaling molecule in a cell, down regulating 4HNE-mediated lipid peroxidation in a cell, inhibiting apoptosis in a cell, or protecting against DNA damage in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                          modulator; colostrinin; intracellular signaling-molecule modulator; 4HNE-mediated lipid peroxidation down regulation; apoptosis inhibition; DNA damage; beta-amyloid; retinoic acid; cytostatic; 4HNE inhibitor; 4HNE-protein adduct formation reduction; 44HNE-mediated glucathione depletion inhibition; p53 inhibition; c-Jun NH2-terminal kinase inhibition.
external organs), as well as enhanced preservation of such organs for transplantation, implantation, or scientific research. The present sequence is a colostrinin constituent peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of a peptide that can be recovered from ovine colostrinin using the method of the invention. The invention provides a method for the recovery of peptides (especially colostrinin) from colostrim in substantially pure, biologically active form and in high yield. The method involves mixing the colostrum with an alcohol to cortaining higher molecular weight caselins and other proteins. Best containing higher molecular weight caselins and other proteins. Best results are obtained using methanol or ethanol of at least 80%, and preferably up to 100%, purity. The alcohol phase is then separated from the precipitate, and the colostrinin is separated from the alcohol. Preferably by evaporation, to form a colostrinin-rich phase, which is recovered. A precipitation agent, such as ammonium sulfate, may be added ither to the alcohol phase or, preferably, to the colostrinin-rich phase to induce precipitation of the colostrinin peptides. The method is generally applicable to the separation of peptides from fluids containing higher molecular weight proteins, lipids, carbohydrates and/or nucleic acids. In an example from the invention, the antigenic profile of containing methods was determined by ELISA using antibodies prepared against a synthetic peptides; including a peptide having the present sequence
                                                                                                                                                                        ö
or reducing the toxic effect of beta-amyloid or retinoic acid on a cell. The present sequence represents a synthetic constituent peptide of colostrinin, which can be used as a modulator in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recovering peptides such as colostrinin from mammalian colostrum, by mixing colostrum with alcohol to form alcohol phase containing peptides and precipitate, separating alcohol phase from precipitate, and recovering alcohol phase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides the sequences of a number of peptides found in ewe's colostrinin. Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system development of a child's immune system, as a distart such as child's immune system, as a distary supplement, and to promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to colostrinin peptide fragments which are useful, inter alia, in the treatment of chronic disorders of the immune system and the central nervous system. Colostrinin peptides are used as a medicament in the treatment of neurological disorders e.g., dementia, neurodegenerative disorders e.g., Alzheimer's disease, motor neuron disease e.g., Parkinson's disease, mental disorders e.g., psychosis and cheases characterised by the presence of betaneurosis, in acquired immunological deficiencies, chronic bacterial and viral infections and diseases characterised by the presence of betanewyloid plaques and as a dietary supplement for babies, small children, adults and senile persons, who have been subjected to chemotherapy or have suffered from cachesia or weight loss due to the chronic disease. Colostrinin peptides are also used as food additives and as an auxillary withdrawal treatment for dumy additers, after a period of detoxification and in persons dependent on stimulants. Colostrinin peptides are used to prepare antibodies and to treat enctional disturbances, e.g. emotional disturbances of psychiatric patients in a state of depression. These colostrinin peptides improves the development of immune system in a new born child and to correct the immunological deficiencies in a child. The present sequence is colostrinin peptide 3 related to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The invention relates to colostrinin peptide fragments which are useful, inter alia, in the treatment of chronic disorders of the immune system and the central nervous system. Colostrinin peptides are used as a medicament in the treatment of neurological disorders e.g., dementia, neurodegenerative disorders e.g., Alzheimer's disease, motor neuron disease e.g., Parkinson's disease, mental disorders e.g. psychosis and neurosis, in acquired immunological deficiencies, chronic bacterial and viral infections and diseases characterised by the presence of beta-amyloid plaques and as a dietary supplement for babies, small children, amyloid plaques and as a dietary supplement for babies, small children, have suffered from cachexia or weight loss due to chemotherapy or have suffered from cachexia or weight loss due to the chronic disease. Colostrinin peptides are also used as food additives and as an auxillary withdrawal treatment for drug addicts, after a period of detoxification prepare antibodies and to treat emotional disturbances, e.g. emotional disturbances of psychiatric patients in a state of depression. These

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention discloses a polynuclectide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel colypeptides. Also claimed is a polypeptide encoded by the polynucleotide, or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contexting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The polynucleotide and encoded genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell respensation. Membrane proteins, disease-related proteins, disease-related proteins, creamcription-related proteins, disease-related proteins, disease-related proteins, diseases.

The croding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence data for this patent is not represented in the printed by the specification, but is based on sequence information supplied by the European Patent Office.
                                                                                       Human, pharmaceutical, diagnostic, gene therapy, tissue regeneration,

The invention comprises the amino acid sequence of proteins from the hyperthermophile Methanopyrus kandleri, the invention also comprises the complete genome from Methanopyrus kandleri. The Methanopyrus kandleri proteins of the invention are useful for enhancing the stability and/or activity of other proteins. The Methanopyrus kandleri genome is useful in a variety of diagnostic and analytical methods. The present amino acid sequence represents a Methanopyrus kandleri protein of the invention.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by content prevention and diagnosis of medical conditions caused by the treatment, prevention and diagnosis of medical conditions caused by constitutions. The disorders include SAPHO syndrome (synovitis, acne, bustulosis, hypertosis and osteonyalitis), uveitis and endophthalmitis. Compared in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a cample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies compactific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by contame linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was
                                                                                                                                                                                                                                                                                                                                                                                                                                 Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris.
                                                                                                                                                                                                                                                                                            Mitcham JL, Wang SS, Bhatia A;

Patent No. 6500798

GENERAL INFORMATION:

APPLICANT: STANTON, G. John

APPLICANT: BOLDOGH, 16tvan

TITLE OF INVENTION: ANALOGS THEREOF AS OXIDATIVE STRESS REGULATORS

FILE REFERENCE: 265.00220101

CURRENT APPLICATION NUMBER: US/09/641,803

CURRENT APPLICATION NUMBER: US/09/641,803

CURRENT APPLICATION NUMBER: 00/149,310

PRIOR FILING DATE: 1999-08-17

NUMBER OF SEQ ID NOS: 34

SEQ ID NO 5

RESULT 2 US-09-252-991A-30479

Sequence 30479, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERCIGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ASERCISION ASERCIS OF SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AUGUSTS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR PELING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1
